CLOUD & DEVOPS ENGINEER

- **Cloud & Infrastructure Engineer** with 7+ years of enterprise IT operations experience and hands-on-expertise in AWS,CI/CD automation, containerization, and Infrastructure as Code. Proven ability to design secure, scalable and highly available environments supporting business-critical systems. Strong background in Linux administration, networking, monitoring and automation within large enterprise environments include Walmart.

CORE COMPETENCIES

. AWS Cloud Architecture (EC2, VPC, IAM, RDS, ELB, AUTO SCALING)
. Infrastructure as Code (Terraform, Cloud Formation)
. CI/CD Automation (Jenkins, GitHub Actions)
. Docker & Kubernetes (EKS)
. Linux System Administration (RHEL, Ubuntu)
. Monitoring & Observability (Cloud Watch, Prometheus, Grafana)
. DevSecOps Practices (IAM hardening, vulnerability scanning)
. High Availability & Disaster Recovering
. Networking (DNS, DHCP, OSPF, BGP, TCP/IP)
. Incident Response & Root Cause Analysis

PROFESSIONAL EXPERIENCE

CLOUD & DEVOPS PROJECTS EXPERIENCE IN WALMART

AWS Infrastructure & CI/CD Implementation

Designed and deployed a production-style AWS environment using Infrastructure as Code and CI/CD automation principles

. Provisioned AWS infrastructure using Terraform (modular architecture with remote state management)
. Designed VPC architecture with public/private subnets, route tables, and security controls
. Deployed containerized applications using Docker and Kubernetes (EKS-based cluster)
. Build CI/CD pipeline using Jenkins and GitHub for automated build, test, and deployment
. Integrated SonarQube for code quality analysis
. Implemented rolling deployment strategy minimized application downtime
. Configured IAM roles following least-privilege security model
. Reduced deployment time from manual release to fully automated pipeline
. Implemented monitoring and alerting using Cloud-Watch and Prometheus

WALMART, Mississauga, ON
May 2017 – 2024

Support enterprise-scale infrastructure in a high-availability retail distribution environment.

- Administered and maintained 50+ Linux and Windows servers supporting internal applications and network services
- Improved system uptime through proactive monitoring and performance tuning
- Automated routine administrative tasks using Bash scripting, reducing manual effort by 40%
- Managed DNS, DHCP, Active Directory and Group Policy configurations
- Installed and maintained Apache, NGINX, and Tomcat servers for internal web applications
- Implemented system patching and security hardening procedures
- Troubleshoot Network performance issue and reduced recurring incidents through root cause analysis
- Configured and Maintained routing Protocols (OSPF, BGP)
- Documented infrastructure architecture and operational procedure

CERTIFICATIONS & TECHNICAL TRAINING

- AWS & Devops from Naresh IT Technology ,Hyderabad 2025
- Cisco Certified (CCNA)/ CCNP(Enterprise) 2021/2022

- Introduction to PC Security (University of waterloo) 2021
- Certified Network Security Specialist (CNSS) , ICSI 2020
- CIMT Diploma in Network Administration / System Administration, Mississauga, ON 2020
